

CAP DIGITAL

CAP DIGITAL PARIS REGION

The French Business Cluster for Digital Content and Services Creation, Knowledge and Communication

Cap Digital is the French Business Cluster For Digital Content. Established as a non-profit organization, its 500 members and 150 research laboratories represent the digital industry's most active players in Digital Content: Image Sound and Interactivity, Video Games, Knowledge Engineering, Digital Heritage, e-Education, Collaborative Technology & Intelligence (ICT), Digital Lifestyle & Services, Robotics, and Design.

Cap Digital provides members key information, networks, and resources: ongoing competitive intelligence, training, partnerships, funding solutions, project reviews, and vital group energy.

This cluster, which currently has 500 members (80% of them innovative SME, 150 public laboratories), has defined four priorities:

- Research & Development
- Company development
- Management and networking
- International deployment

AF83

af83 is a social platform creator & operator, with offices in Paris, San Francisco & Lisbon.

Though young, AF83 has been chosen by industry leaders in France (and now some overseas) to create some cool sites: a Young talents scouting site for a Vodafone subsidiary, a music site for Universal, an internal innovation management tool for CapGemini, a fashion design network of shops for les 3 Suisses, and others...

AF83 is a multi-tech shop with developments in Ruby on Rails, Drupal, Erlang & our in-house framework (<http://turb.ulenc.es>). We are involved in the FLOSS community through code sharing & event organizing.

AF83 also participates in or leads research projects pertaining to all aspects of social networking. From sociology to technology to the economy, we study the brightest solutions out there and develop our own.

In short: we spend our waking hours trying to bring you the next small things you'll need to develop your sites and the huge platforms you'll want to sign up on.

BEARSTECH

Bearstech is a young, innovative company, gathering open source software engineers, and whose core activity is IT infrastructure management and all-round web application optimization (Value-added services around web applications, hosting and maintenance, Development, Hosting, Scaling expertise, Audits).

Bearstech focuses on two research & development areas.

1/Being close to its core activity it consists of THD (Very High Bandwidth), Cloud computing / Virtualization / Xen, OSSMOSE (free, open and online ERP), Packaged mail servers, Simplified and scalable Rails and Django hosting, Source Control Management hosting.

2/The second area is currently focusing on Open Source Hardware: the Hackable Devices, designed to be modified and extended.

A dedicated company and its website will be created soon (www.hackable-devices.com). It will rely on three approaches: selling devices, prototyping and integration services, and design of new devices.

XWIKI

XWiki is a French company created in 2004 that provides services and enterprise collaboration products based on a second-generation wiki (the offering focuses on one product, the professional wiki XWiki Enterprise, that can be extended through many applications like XWiki Watch or XWiki Workspaces). People need to work together well and play as a team for their business to succeed today more than ever before. XWiki lets them do exactly that. It lets organisations adapt their collaboration tool to the way they want to work together. XWiki distributes its solutions in the form of free software. All the products are released under the LGPL Open-Source license. It means that everyone can download, use and modify them freely. Today, XWiki is the leader of collaborative Open Source solutions for enterprises, with more than 100 customers and thousands companies using our products.
